

Karta's methodology, with a digital partner at every stage.

The Engagement Workspace puts Claude inside each stage of how Karta delivers. It **reads the engagement's own evidence**, **drafts Karta's artifacts** in Karta's method, and **remembers every decision** for the next activity. Code calculates, people approve, and nothing is sent by software. Below: the two highest-value workflows at each stage, and where each stands.

ACROSS EVERY STAGE

Ask Claude with the engagement's memory, live today: answers from the evidence, cited, honest about gaps. **The decision and assumption log**, next: every decision with its source, owner and date, which is what makes reconciliation, triage, handover and onboarding possible.

LIVE

 today, workspace or Karta skill

 roadmap

HOW IT STAYS UNDER CONTROL

Reads as the person looking

No shared logins. If you are not on the project, you see nothing from it.

A named person approves

Every client-facing output carries a reviewer's name and time. The AI never approves.

Nothing sent by software

The workspace produces. A person decides and sends.

Unknown is never Green

Missing evidence is shown as missing and recorded with the output.

FIRST THROUGH THE DOOR

Project Status Reporting, live for Legend and released monthly across the 90-day push, then the **Foundations Package** from requirements to mockups. Each capability arrives with an owner, a readiness label and a place on this lifecycle, and its use and corrections are measured automatically.
