

KARTA AI ENGAGEMENT WORKSPACE

Open Monday already knowing where your engagement stands.

Every Karta engagement gets its own AI-enabled workspace: the plan, the evidence, the decisions and the next step in one place, shaped by Karta’s methodology, with a named person accountable for every output. Claude **reads the engagement’s evidence**, **drafts Karta’s artifacts** and **remembers every decision**. Code calculates, people approve, nothing is sent by software.

- ✓

See where you stand
The Karta lifecycle with real dates, the next control point, and whether its evidence is ready.
- ✓

Know what needs attention
Slipped milestones, open decisions, capacity gaps. Calculated from the sources, not typed in.
- ✓

Do the week’s work without rebuilding the context
Status, sprint reviews, UAT scripts and briefs prepared from the same approved record.

Real, and running. First workspace live for Legend on September 8, 2026; first Weekly Status approved and the deck built the next day. Set-up takes about ten minutes.

A DIGITAL PARTNER AT EVERY STAGE OF KARTA'S METHODOLOGY · THE TWO HIGHEST-VALUE WORKFLOWS PER STAGE

Sales to Delivery handover		Project Planning align · kick off · first drafts		Foundations requirements · design		Build data hub · model · reports		Test UAT · defects · sign-off		Train & Deploy training · cutover		Continuous Support handover · triage	
01	LATER	01	LIVE	01	NEXT	01	LIVE	01	LIVE · SKILL	01	LIVE · SKILL	01	LATER
Sales Handover package Scope, assumptions, commitments and open questions assembled from the proposal, RFP answers and sales notes.		Engagement setup and access check A workspace in ten minutes from links to Asana, SharePoint, Granola and Harvest, verified as the owner.		Meeting closeout into requirements Workshop recordings become requirements, decisions and assumptions the same day, with sources.		Weekly Status Evidence read as you, status by code, narrative by Claude, approved under a name, built into the deck.		UAT scripts from requirements The Karta test package generated with traceability from requirement to result.		Role-based training material Admin, builder and end-user decks drafted from the configured solution.		Support handover with open items The support team inherits the record, decisions and open items, not a folder.	
02	LATER	02	LATER	02	LATER	02	NEXT	02	LATER	02	LATER	02	LATER
Kick-off deck and first two weeks Drafted from the handover; the plan becomes the milestones tracked from then on.		Data intake coordination The data request list drafted from scope; what arrives classified and tracked.		Design-to-scope reconciliation The emerging design compared with the SOW; divergence flagged before build.		Sprint review preparation What will be shown, requirements covered, evidence; the business's disposition recorded.		Defect intake and triage Defects, clarifications and changes classified as they arrive; the log kept current.		Go-live package and closeout Readiness evidence assembled; closeout and lessons learned from the record.		Issue triage and recurring analysis Requests classified, resolutions from the engagement's history, patterns into the roadmap.	

ACROSS EVERY STAGE

Ask Claude with the engagement's memory, live: answers from the evidence, cited, honest about gaps. **The decision and assumption log**, next: every decision with its source, owner and date.

HOW IT STAYS UNDER CONTROL

- Reads as the person looking**
No shared logins. Not on the project, you see nothing from it.
- A named person approves**
Every client-facing output carries a reviewer's name and time.
- Nothing sent by software**
The workspace produces. A person decides and sends.
- Unknown is never Green**
Missing evidence is shown as missing and recorded.

FIRST THROUGH THE DOOR

Project Status Reporting, live for Legend and released monthly across the 90-day push, then the **Foundations Package** from requirements to mockups. Each capability arrives with an owner, a readiness label and a place on the lifecycle, measured automatically.
