

KARTA AI ENGAGEMENT WORKSPACE

Open Monday already knowing where your engagement stands.

Every Karta engagement gets its own AI-enabled workspace. Claude **reads the engagement’s evidence**, **drafts Karta’s artifacts** and **remembers every decision**, inside Karta’s method and with a named person accountable for every output.

- A

See where you stand

The lifecycle, the next control point, and whether its evidence is ready.
- B

Know what needs attention

Slipped dates, open decisions, capacity gaps. Calculated, not typed.
- C

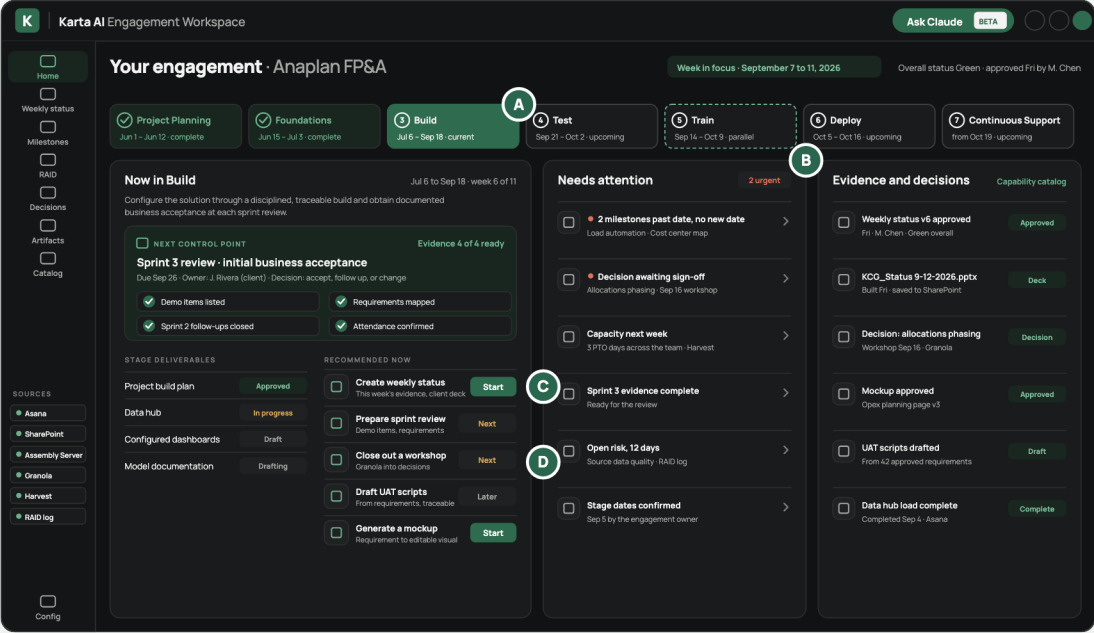

Do the week’s work without rebuilding context

Status, sprint reviews and UAT scripts drafted from one approved record.
- D

One door for every AI capability

Each arrives with an owner, a readiness label and a place on the lifecycle. Use and corrections are measured, so Karta knows what to scale.

Real, and running. Live for Legend since September 8, 2026. First Weekly Status approved and the deck built the next day. A new engagement is set up in about ten minutes.

A DIGITAL PARTNER AT EVERY STAGE OF KARTA'S METHODOLOGY · THE TWO HIGHEST-VALUE WORKFLOWS PER STAGE

LIVE in the workspace today **SKILL** today in a consultant's Claude session, joins the workspace later **NEXT** the 90-day push **LATER** roadmap

Sales to Delivery handover	Project Planning align · kick off	Foundations requirements · design	Build model · reports	Test UAT · sign-off	Train & Deploy training · cutover	Continuous Support handover · triage
Sales Handover package LATER	Engagement setup and access check LIVE	Meeting closeout into requirements NEXT	Weekly Status LIVE	UAT scripts from requirements SKILL	Role-based training material SKILL	Support handover with open items LATER
Kick-off deck and first two weeks LATER	Data intake coordination LATER	Design-to-scope reconciliation LATER	Sprint review preparation NEXT	Defect intake and triage LATER	Go-live package and closeout LATER	Issue triage and recurring analysis LATER
Starts the record the whole engagement will use.	Everything after it depends on setup being right.	Catches ambiguity and scope drift before build.	Weekly, measurable, and traceable as a by-product.	Coverage comes free; scope disputes get settled.	The longest deliverables, drafted from the solution.	Support inherits the memory, not a folder.

HOW IT STAYS UNDER CONTROL

- Reads as the person looking.** No shared logins. Not on the project, you see nothing from it.
- A named person approves.** Every client-facing output carries a reviewer's name and time.
- Nothing sent by software.** The workspace produces. A person decides and sends.
- Unknown is never Green.** Missing evidence is shown as missing and recorded.

THE NEXT 90 DAYS · PROJECT STATUS REPORTING FIRST, ONE RELEASE A MONTH

OCTOBER Foundation Weekly Status every Friday on two engagements. Ask Claude live. Capability catalog with owners and readiness. Teams onboarded in under an hour.	NOVEMBER Context Meeting notes from Granola and capacity from Harvest read into attention items and answers. Drafting tuned from a month of measured corrections.	DECEMBER Beyond status Sprint review preparation live in Build. First Foundations Package piece: requirements, decisions and scope visible. The evidence for the scale decision.
--	---	--

The screen is illustrative and shows planned capabilities beside live ones; the engagement, people and decisions on it are examples. Release contents are the working plan and will be confirmed at each monthly review.
